

REMOVABLE MULTIPURPOSE CONSOLE

Abstract

The present invention provides for an improved multipurpose console, such as a center floor console, that integrates a number of desirable features into a removable and easily portable structure to provide greater comfort and convenience to vehicle occupants. In one embodiment, the multipurpose console includes a housing having a latching mechanism fixedly configured to releasably engage a mounting member of the vehicle and an anchor point associated with the housing so that a transport device may be removably secured thereto to transport the removable console to any desired location. The housing may further be provided with laptop anchor points adapted to securely receive a laptop computer and/or power and sound contacts respectively adapted to cooperate with power and sound sources of the vehicle to provide power and sound to the console.
